$\infty$	1.282	1.645	1.960	2.326	2.576

### Opombi.

- Pri  $df = \infty$  dobimo kvantile standardne normalne porazdelitve:  $t_\alpha(\infty) = z_\alpha$ .
- Za velike  $df$  velja asimptotični obrazec  $t_\alpha(df) \approx z_\alpha + \frac{z_\alpha^3 + z_\alpha}{4df}$ .
